Experience

Ghost

San Francisco (Remote)

Founding Engineer

Nov 2025 - Present

- Design and build Ghost's Electron and React desktop app, including chat, agent runs, and native macOS integrations.
- Build interaction patterns for streamed output, tool calls, failures, and user approvals across multi-step agent workflows.
- Contribute across the product UI and local agent runtime, shaping how backend state is represented and controlled in the app.

Rae

Bengaluru, India

Co-Founder & Software Engineer

Jul 2025 - Nov 2025

- Led product design and frontend engineering for an AI desktop assistant built with Tauri and React.
- Connected the interface to the team's backend agent harness for streaming responses and local system actions.
- Reached roughly 1,000 waitlist signups before the three-person team joined Ghost prior to launch.

Optacloud

Singapore (Remote)

Full Stack Developer Intern

Dec 2024 - Jun 2025

- Built three web products with React, Firebase, Material UI, and Google Cloud.
- Automated research and team operations using Gemini, n8n, search APIs, Cloud Functions, and chat integrations.

Projects

Flash: AI Email and Calendar Agent

TypeScript, Next.js, Gmail API, Supabase

- Built a 14-tool agent harness that can search and organize Gmail, draft replies, and create, update, or delete Calendar events.
- Designed the streaming chat interface with typed email and event cards plus approval gates for every send or calendar change.
- Created a UI system inspired by Apple's Liquid Glass, with layered translucent surfaces and responsive, interactive controls.

Furnace: Agentic Coding Harness

TypeScript, React, Vite, Pi

- Designed and built the React product site and Pi-based terminal UI, including four layouts, themes, status configuration, and streaming states.
- Built `/evolve`, an iterative coding workflow with orchestration, failure recovery, and a final verification pass.
- Used WebGL shaders on the site to recreate metal and concrete surfaces with depth-aware lighting.

TeamChannel: Shared Workspace for Teams and AI Agents

TypeScript, Node.js, MCP

- Built a local-first workspace where people and coding agents share projects, tracks, and persistent vault context through a dashboard, CLI, daemon API, and MCP server.
- Designed the dashboard for teams to visualize shared projects, active work, and vault context in one place.

Perch: macOS Notch Assistant

Swift, SwiftUI

- Built a native SwiftUI app that expands from the MacBook notch to show chat, media controls, system metrics, and live AI coding sessions.
- Designed and implemented the product website with React, Vite, and Tailwind CSS.

Skills

Product Engineering: TypeScript, Swift, Python, React, Next.js, Electron, Tauri, SwiftUI, Node.js, Supabase

Design Engineering: Figma, Tailwind CSS, Framer Motion, GSAP, Three.js

Agent Systems: Harness Architecture, Tool Loops, Context Management, Approval Workflows, Skills, and MCP Servers; Pi, Factory Droid, Cursor, Compound Engineering, and G-Stack

Education

CMR Institute of Technology, B.Tech in Computer Science; GPA: 8.75

Expected 2027
